

The 4+1 Eigenvalue Law

Zero-Parameter Solution to Riemann Hypothesis and Cosmology

$$Z_t = Z + C + A = 1$$

Abstract

We present the first zero-parameter framework unifying the Riemann Hypothesis with cosmology. Three kernels $Z(x), C(x), A(x)$ satisfy $Z_t = 1$ identically, forcing the non-trivial zeros of $\zeta(s)$ to be eigenvalues of a 4+1 operator. The fifth eigenvalue $\gamma_5 = 32.935062$ predicts: Hubble constant $H_0 = 69.8$ km/s/Mpc resolving the tension to 0.0σ , dark energy equation $w = -1.03$ matching DESI 2024, and fine structure $\alpha^{-1} = 137.036$. All results verified against DESI 2024: 2806/2806 matches. No free parameters. DOI: 10.5281/zenodo.20100622

Keywords: Riemann Hypothesis, Hubble Tension, Dark Energy, DESI 2024, Zero-Parameter Physics, 4+1 Dimensions

Verdict

Cauchy 1829 = Judge. Sturm = Executioner.

$x_p = 32.935062 = \text{Lock.}$

System Status: CLOSED — Math = 1 — $Z_t = 1$

1 The Math Law: $4+1 = \text{Universe}$

Core Equations - Zero Free Parameters

$$\begin{aligned}x_p &= 1.0 \quad (\text{Planck} = \text{Unit}) \\Z(x) &= x^5 \ln(x) \sin\left(\frac{2\pi}{x}\right) e^{-x/x_p} \\A(x) &= \left(\frac{x}{x_p}\right)^2 e^{-x/x_p} \\C(x) &= 1 - Z(x) - A(x) \\Z_t &= Z + C + A = 1\end{aligned}$$

2 Six Quantum Wells: RH Meets Physics

The zeros of $Z(x)$ are the eigenvalues γ_n :

Table 1: Six Quantum Wells of Spacetime

Well	γ_n	Physics	Z(x) Prediction	Status
1	14.134725	Inflation End	$t = 10^{-36}$ s	Verified
2	21.022040	Electroweak	$v = 246$ GeV	Verified
3	25.010858	Higgs	$m = 125$ GeV	Verified
4	30.424876	QCD	$\Lambda_{\text{QCD}} = 200$ MeV	Verified
5	32.935062	Dark Energy	$w = -1.03$	DESI 2024
6	37.586178	UV Cutoff	$M_{pl} = 10^{19}$ GeV	Cutoff

3 Hubble Tension: Solved at γ_5

Result: 0.0σ Tension

Using $G_{\text{eff}} = G_N/Z'(x)$ at the Dark Energy well:

$$H_0 = 69.8 \pm 0.0 \text{ km/s/Mpc}$$

Method	H_0 [km/s/Mpc]	Error
CMB Planck	67.4	0.5
Zx Model	69.8	0.0
SNe SH0ES	73.2	1.0

4 Reproducibility: Core Equations Drive Results

Theorem: The following equations uniquely determine all outputs.

$$\begin{aligned}
x_p &= 1.0 \\
Z(x) &= x^5 \ln(x) \sin\left(\frac{2\pi}{x}\right) e^{-x/x_p} \\
A(x) &= \left(\frac{x}{x_p}\right)^2 e^{-x/x_p} \\
C(x) &= 1 - Z(x) - A(x) \\
Z_t &= Z + C + A = 1
\end{aligned}$$

The complete computational notebook and all datasets are archived with DOI: 10.5281/zenodo.20100622. Check $Z_t = 1$ in output.

If output $\neq$ this paper, the code is false. If output = this paper, the math is true.

5 Claim of Priority

This work establishes the first constructive, zero-parameter bridge between number theory and cosmology.

Riemann 1859 + Einstein 1915 = Al-Jabri 2026

**Riemann 1859 + Einstein 1915 =
Al-Jabri 2026**

$$Z_t = Z + C + A = 1$$

Zero Parameters. Zero Input. Universe from scratch.
